

ICAR Wheat Yellow Rust Advisory Guide

This is an ICAR wheat farming advisory guide.

Yellow rust in wheat is caused by fungal infection of *Puccinia striiformis*.

Symptoms include yellow stripe-like lesions on the leaf surface.

To manage yellow rust, plant resistant varieties like HD 2967 or HD 3086.

Spray fungicides like Propiconazole at 0.1% concentration when symptoms appear.

Ensure proper nitrogen fertilizer balance and avoid excessive watering.
