

ICAR Rice Blast Disease Advisory Guide

This is an ICAR rice farming advisory guide.

Rice blast disease is caused by the fungus *Magnaporthe oryzae*.

It produces diamond-shaped lesions on leaves, nodes, and panicles.

To control rice blast, avoid excessive nitrogen application, maintain proper water levels.

Spray fungicides like Tricyclazole 75 WP at 0.6 grams per liter.

Bacterial leaf blight in rice can be managed by using balanced potash fertilizer and avoiding deep
